WORK EXPERIENCE

CubeHQ (Software Engineer, AI & Backend) | Python, TypeScript, Go, PostgreSQL, AWS — Feb 2024 – Present

- Architected **6 remote MCP servers** exposing **150+ tools** that let Claude and ChatGPT query Microsoft Ads, Meta, Google Ads, Merchant Center and internal products, each with its own **OAuth 2.1** server (PKCE, DCR, CIMD), rotating refresh tokens, **AES-256-GCM** encryption and **OpenTelemetry** tracing.
- Engineered **LLM reply generation** for a review platform ingesting from **56 platforms** (**Django, Celery**): a two-pass **gpt-4o-mini** pipeline with **Pydantic**-validated JSON and a **ReAct agent**, served by an autoscaled worker pool (**2–8 ECS tasks**).
- Designed a **Redis sliding-window distributed rate limiter** that keeps ingestion within API quotas (up to **2,000 calls/min**), and a **Plasmo** Chrome extension that captures data from **30 portals** with no public API.
- Shipped **10+ Shopify apps** (**React Router 7, Prisma, BullMQ**) with atomic usage-based billing across 4 pricing tiers, including a **Gemini** alt-text generator that scans up to **200k images** per store at **15x** lower model cost.
- Delivered an **AI SEO plan generator** (**Claude** structured outputs, **BullMQ**, **Playwright**) that replaces about 50 manual spreadsheet tabs per client, and parallelized its URL inspection stage from **20 min to under 3 min**.
- Designed a secure Shopify **token handoff** between two services using **HMAC-signed** requests and **Postgres advisory locks**, so a rotating refresh token is never refreshed twice, plus a webhook relay with **exponential backoff** that never drops store events.
- Led a team of **12** delivering **1,500+ website changes a month** across **174 client sites**, and owned production releases.

PROJECTS

Cite: AI Search Visibility Platform | TypeScript, Bun, Hono, PostgreSQL, pgvector, BullMQ, AWS ECS

- Built a SaaS that tracks brand visibility across **6 AI search engines** (ChatGPT, Gemini, Claude, Perplexity, Google AI Overviews and AI Mode) on **25 BullMQ queues**, with a **71-tool MCP server**.
- Cut LLM cost **93%** ($575 to $42 a month) and latency **7x** (34.9s to 5.1s) after benchmarking 6 model and reasoning settings and moving extraction to the **OpenAI Batch API**.
- Recovered **62,881** stuck scraper tasks by moving webhooks onto queues with **reconciliation pollers** and transactional task claiming, and built a **Stripe** billing state machine with hourly reconciliation.
- Fixed Postgres **lock convoys** behind 75% of database load, making the hottest query **32x faster** (5.2s to 164ms).

StoreHQ Conversion Intelligence | TypeScript, Bun, Hono, Drizzle, PostgreSQL, BullMQ, OpenAI

- Developed a Shopify analytics platform syncing **6 data sources** on **14 BullMQ queues**, with a **17-tool MCP server** and **7,000+ automated tests**.
- Designed an **extractor and reviewer LLM pipeline** with strict **JSON Schema** outputs that turns meetings, Slack and Gmail into cited brand facts (**3.7x recall**), and cut cohort queries from **14s to 0.3s** with materialized CTEs.

RioRank: AI Topic Planner | TypeScript, Bun, BullMQ, PostgreSQL, OpenAI, React 19

- Created a 7-step LLM pipeline with **10 per-task model routes**, a cost ledger ($1.70 per run) and an **embedding and LLM-judge** gate that nearly doubled topic-to-page matches (14% to 25%).

ReplyQueue: Client Inbox Triage | TypeScript, Fastify, PostgreSQL, Claude, Gmail and Slack APIs

- Built a tiered reply classifier (rules, then **Naive Bayes**, then **Claude Haiku**) that keeps paid model calls low, shrinking the unmatched queue from **255 to 24** and thread load time from **300ms to 100ms**.

SKILLS

Languages	Python, TypeScript, JavaScript, Go, SQL
AI & LLM	Claude, OpenAI (GPT-4.1/5, Batch API), Gemini, Qwen, MCP, ReAct agents, structured outputs (Instructor, Zod, Pydantic), embeddings, pgvector, prompt caching, LLM evals
Backend & Tools	Node.js, Bun, Hono, FastAPI, Django, Celery, BullMQ, React, Next.js, Docker, Git, GitHub Actions
Databases	PostgreSQL, Redis, DynamoDB, MongoDB, Drizzle ORM, Prisma
Cloud	AWS (ECS, Lambda, EC2, RDS, S3, DynamoDB, Secrets Manager, CloudWatch)
Core Subjects	Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP, System Design

EDUCATION

National Institute of Technology (NIT), Durgapur — 2020 – 2024
B.Tech in Electronics and Communication Engineering — CGPA 8.62 / 10
JEE Main: **98.79 percentile**; JEE Advanced: **All India Rank 12,924**
